CDE DAIRY MARKETS & MANAGEMENT UPDATE

except where noted

Keep Safety Top of Mind: Now that spring crop work is in full swing, it is appropriate for the reminder that safety is of the utmost importance. We know the dangers farmers face daily. However, sometimes if we are in a hurry to complete tasks or doing dangerous jobs that have been completed without issue year after year, we can drop our guard and not remember to follow proper safety measures to keep out of harm's way.

Each November, the U.S. Bureau of Labor Statistics (BLS) releases its annual report of workplace accidents and fatalities. With the November release date, the current set of statistics covers the calendar year 2021. Just as I have reported for several years in a row, for 2021, the category of agriculture, forestry, fishing, and hunting occupations continues to be a top contender for most dangerous jobs in the U.S.

Since these jobs only account for approximately two percent of total jobs in the nation, there are not as many total injuries recorded, but the incident rate of injuries is tied for the highest rate at 4.6 injuries per 100 full-time equivalent (FTE) workers among private industry occupations.

Transportation and warehousing jobs are also at 4.6 injuries per 100 FTEs. Health care and social assistance at 4.3; arts, entertainment, and recreation at 3.7; and retail trade at 3.6 injuries per 100 FTEs round out the top-5 highest private industry injury rates. There were 2.61 million private industry injuries recorded during 2021 with 43,500 (1.6%) of those occurring under the agriculture, forestry, fishing, and hunting category. These statistics are both down from 2020's 2.65 million total injuries of which 45,900 (1.7%) were from agriculture, forestry, fishing, and hunting Fatal injuries are also included in the BLS report.

In 2021, there were 5,190 job-related fatalities across the coun-

MAY-23 JUN-23

Average basis for

try. For this report, fatal injuries within the subcategory (classial purposes. The

CME DAILY FUTURES & OPTIONS TRADING — MAY 17, 2023 AT THE CLOSE *AVG = JUL-23

fied slightly different from nonfatal injuries) farming, fishing, and forestry categorv are further broken down into their respective occupa-

tions. Of the 5,190 fatal injuries, 218 were in this subcategory, and 133 (61%) of those occurred in agriculture-related accidents.

Furthermore, just looking at the raw data without any reference to what the actual fatal incident was, age may play a part in the likelihood of being involved in a fatal work-related accident.

Of the total number of fatal occupational injuries, 1,087 occurred in individuals aged 45 to 54 years and 1,140 occurred in the age range of 55 to 64. These two age ranges accounted for 43% of total occupational fatal injuries in 2021 A similar trend is noted within the report that shows annual

data from 2017 to 2021. Each year for the last five years shows these two age ranges accounting for the largest number of fatal accidents relative to the other seven age ranges listed. One thing to note when reading this article is that the BLS non-

fatal injury data is based on employer reported information and only includes data from farms with 11 or more employees. Therefore, the incident rate is likely underestimated. Based on a quick internet search, I found that anywhere from

86% to 99% of workplace accidents are avoidable. I know that

is a 13-percentage point spread, but the point is that the over-

whelming majority of nonfatal incidents can be avoided. In every

article I found, human error was reportedly the main reason for workplace accidents. Frequent causes of workplace accidents were attributed to complacency, overconfidence, overexertion, tiredness, and haste.

We have an element of control over these accident causes. Keeping safety at the top of mind while we work during this

busy planting/harvesting season will help minimize the chances of becoming a statistic in the November 2024 U.S. BLS database
